Project report

Project title: Grafting of avocado fruit
trees.
(Persea Americana)

Name: Marion Valentine Wainuku.

Index no: 11241001198

GROUP: 4 Member.

i Introduction:

- a. Grafting is the practise of joining two ~~separate~~ woody stems, that is a scion the part at the top and a rootstock the bottom part, so that they grow as one plant.
- b. The reason why we choose grafting is because:
- i. Plants raised through grafting or budding mature earlier by shortening the maturity rate.
- ii. Damaged plants parts can be prepared through budding.
- iii. Plants are able to maintain the desirable parental characteristics.
- iv. Lastly the farmer is able to get more than one varieties of fruits in one plant.

ii Identification of Issues:

According to my research on the most current issue around the school and the community is that fruits take a long time to mature hence leading to ~~inadequate supply of nutrients, hence leading to nutritional diseases such as anaemia, bone diseases and birth defects~~. I found out that this problem can be solved by grafting / budding fruit trees therefore leading to early maturity of fruits. Since the ungrafted fruit tree can take around seven and a half years that is on an avocado fruit tree which we can shorten the maturity rate through grafting.

iii Project objectives:

Grafting of avocado fruits matures earlier than those propagated from seeds.

- i. By the end of this project I will be able to do grafting of fruit trees.
- ii. By the end of this project I will be able to know the precautions that have taken place.

03/1

iii When the seedlings are ready for planting we will sell to the community in order to have an income.

iv Project description .

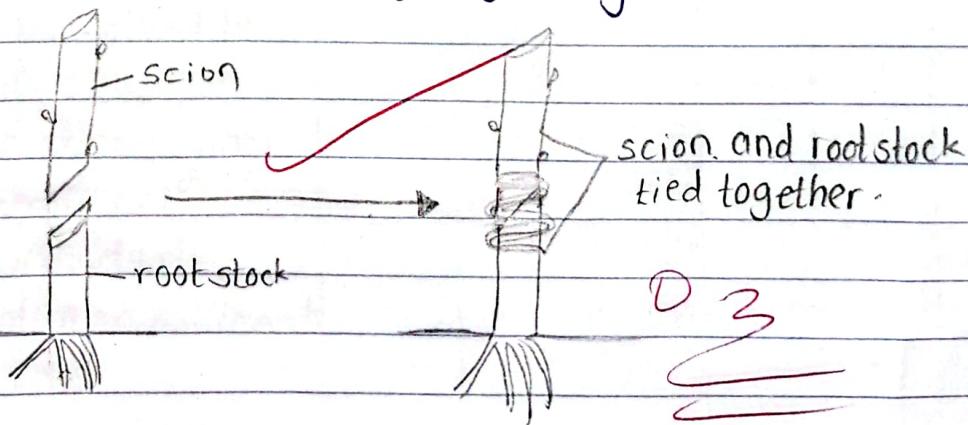

We carried out our project through whip or tongue grafting where the rootstock and the scion should be of the same diameter. We used the materials that were sterilised which included;

- i Secateurs
- ii Grafting tape.
- iii Scapels .
- iv Ajembe .
- v Watering can .
- vi A rootstock .
- vii A scion .
- viii A shade net.
- ix Steriliser.

We carried our project as a group of five people that is

1. Marion Valentine Wainuku.
2. Rimui Cynthia Njeri.
3. Nyakonyu Caroline Nyambura.
4. Njunguna Joan Wairimu.
5. Mung'one Tracy Mideva.

whip or tongue grafting.

✓ Budget.

According to our project we were able to use an amount of;

AGRICULTURE PROJECT BUDGET PER GROUP 2025-

Item	Quantity	Unit cost	Total cost
Scapel	5	10	50
Watering can	1	400	400
Grafting tape	20	20	400
Rootstock	20	100	2000
Scion	20	10	200
Steriliser	10mL	150	150
Shade net	5mx10m	3000	3000
Rake	1	350	350
Trainer	1	1500	1500
Jembe	2	500	1000

TOTAL = 9,200

vi Project implementation plan and Timelines

ACTIVITIES.

MONTHS.

January	February	March	April	May	June	July
---------	----------	-------	-------	-----	------	------

a. Instructions were given by our teacher on 12th

b. I did a research on the most pressing issue around the community

c. Arrival of the seedlings in our school on 13th

d. We did individual presentation on our research and took videos

0 - 7

January	February	March	April	May	June	July
---------	----------	-------	-------	-----	------	------

- e. Registering of group members on 19th
- f. Watering and inspection of the seedlings
- g. Fortnight report on the project.
- h. A training expert from the community was invited on 6th
- i. We did our grafting on 6th 
- j. Group discussions
- k. Writing our individual report on grafting/budding of fruit trees 
- l. Writing a group report on grafting/budding of fruit trees
- m. Report writing

vii Project Implementation and procedure-

- a. Selection location for ~~planting~~ - a well shaded and secured places was selected. The shade was erected using a net which was 5m x 10m. The seedling bed for each and every group was 1m x 1m
 - b. Assembling tools - ~~Tools~~ like scap and watering can were brought on time. The materials that we used all were sourced from a reliable source to prevent transmission of diseases to the rootstock and the scion.
 - c. Training session and performing grafts and buds - The training was done once by an external trainer from the community. We did the actual grafting of the avocado seedlings as guided
- (34)*

by the trainer and the help of our teacher as one of us was taking a video.

We chopped off the stem of the mango tree seedling using the secateurs. We then made a vertical cut on the rootstock using the sharp scalpel of about one inch. We also made a wedge shaped scion and fitted it into the vertical cut in the rootstock. In order to ensure compatibility we tied together through tight tying with the grafting tape. We then took back the grafted fruit trees seedlings back to the nursery plot where we watered them and kept them under the shade for proper growth.

d) Monitoring growth progress post operation - monitoring was done everyday by group members making sure that the scion sprout and always the seedlings were in a shade to prevent dehydration. Watering was done everyday in the morning and evening.

e. Routine - A table of activities was made by group members and each member was given a responsibility such as once every week of watering and weeding. Doing that 90% of our seedlings survived.

viii Evaluation:

Before the training I had practised to do grafting on my own using three tree fruits and out of the three only one survived. However I did not give up I did for the second time with two fruits tree only one survived. After the technical expert in the community was invited and I was able to graft five fruit trees and all of them survived and they were able to sprout.

27

ix Conclusion.

As an individual I have greatly learned how to graft fruit trees, also I decided to do grafting at our home, so that our people around the community can learn also the knowledgeable technique. For now I have grafted three fruit trees at our home.

x Recommendation.

Grafting/budding of fruit trees has enable me to become more knowledgeable hence training other people to do grafting as well. The grafted fruit trees we have decided to sell them to the society to earn an income. I would like also to request the minister for Agriculture to organize training section for each and every community. In order to discourage fruit shortage in the societies through grafting/budding.
